

## TECHNICAL DATA

### KC-430

#### Description:

KC-430 is a powdered sulfamic acid based cleaner, easily soluble in water. Sulfamic acid is very effective at removing rust, lime scale and other inorganic soils. Its low volatility, low corrosivity, and low toxicity make it safer to handle than hydrochloric acid.

#### Physical Properties:

Appearance – White crystals

Odor – None

Bulk density – 1.2-1.5 g/cc

Active ingredient – Sulfamic Acid

#### Directions for Use:

Dissolve 2-8 ounces of KC-430 per gallon of water (80°F-140°F). Apply by brush, circulation, pressure spray, or soaking. Allow the product to dwell on surfaces for 10-15 minutes to dissolve soils. Longer contact time, brushing, and/or other mechanical action might be needed for tough soils or large scale build-up. Rinse thoroughly with potable water to remove all residue.

Prepare fresh KC-430 solution prior to each use. Prepared solution should be used within 24 hours or discarded.

Before use in federally inspected meat and poultry food processing plants and dairies, food products and packaging materials must be removed from room or carefully protected.

#### Safety:

Corrosive. Avoid contact with skin and eyes.

Read Safety Data Sheet (SDS) before using this product.

#### Storage:

Store in a cool, dry, well-ventilated place.
