

CECURE[®]

CPC Antimicrobial

SAFE FOODS[™]
CHEMICAL INNOVATIONS

Cecure is one of the most effective direct food contact antimicrobials available for poultry processing today.

Cecure's proprietary formula drastically reduces the number of pathogenic and spoilage organisms, including the most common illness-inducing strains of Salmonella, resulting in safer poultry products with a longer shelf life. Due to its neutral, non-reactive nature, Cecure is also safe to handle and well-suited for use in plant environments.

KEY BENEFITS

- > No off-gassing, neutral pH, non-reactive
- > Approved by FDA, USDA, Health Canada and others
- > Rapid pathogen kill through cell lysis
- > Optimized for use with the Safe Foods Waterfall drench cabinet system to support full-coverage antimicrobial application
- > Highly effective against Campylobacter and Salmonella
- > A safer, more employee-conscious alternative to peracetic acid (PAA)

ABOUT SAFE FOODS CHEMICAL INNOVATIONS

Safe Foods, a division of Fortrex, offers superior chemical solutions, intervention processing aids, innovative equipment, and real-time analytics software to food processing partners around the world.
